

TEST MEDICAL RECORD – AUDIT STRESS VERSION

FACILITY INFORMATION

Facility Name: Universal Health Clinic

Facility Type: Outpatient / Urgent Care

Encounter Type: Initial Visit

PATIENT DEMOGRAPHICS

- **Patient Name:** John Doe
 - **Gender:** Male
 - **Date of Birth:** 05/12/1980
 - **Age:** 45
 - **Medical Record Number:** UHC-458921
 - **Date of Service:** 02/06/2026
-

CLINICAL DOCUMENTATION

Chief Complaint

Patient presents with a suspicious skin lesion on the left forearm and reports accidental ingestion of a chemical substance.

History of Present Illness (HPI)

Skin Condition:

The patient reports noticing a dark, irregularly shaped mole on the **left forearm** approximately **6 months ago**, which has recently increased in size and changed in color. The lesion measures approximately **1.4 cm**, with irregular borders and variegated pigmentation. A punch biopsy was performed during a previous visit, and pathology results confirm **malignant melanoma**.

Poisoning / Chemical Exposure:

Approximately **2 hours prior to presentation**, the patient **accidentally ingested a small amount of 2-propanol (isopropyl alcohol)** while cleaning tools in his home garage. The patient states the substance was mistakenly consumed after being transferred into an unlabeled container.

- **Intent:** Accidental
 - **Symptoms:** Mild dizziness and nausea
 - **No** loss of consciousness
 - **No** suicidal ideation reported
-

Review of Systems (ROS)

- **Skin:** Positive for changing pigmented lesion
 - **Gastrointestinal:** Mild nausea, no vomiting
 - **Neurological:** Mild dizziness, alert and oriented ×3
 - **Psychiatric:** Denies depression, anxiety, or self-harm intent
-

Past Medical History

- Hypertension (controlled)

Medications

- Amlodipine 5 mg daily

Allergies

- No known drug allergies
-

Physical Examination

General:

Patient is alert, cooperative, in no acute distress.

Skin:

- Left forearm: Dark pigmented lesion with irregular borders, approx. 1.4 cm
- No signs of secondary infection

Neurological:

- GCS 15

- Normal speech and coordination

Vitals:

- BP: 128/82 mmHg
 - HR: 84 bpm
 - RR: 16
 - Temp: 98.4°F
 - SpO₂: 99% on room air
-

ASSESSMENT / DIAGNOSES

1. **Malignant melanoma of skin of left upper limb**
 2. **Toxic effect of isopropyl alcohol ingestion**
-

PLAN OF CARE

- Refer patient to **Oncology** for melanoma staging and treatment
 - Monitor vitals for 4–6 hours for chemical exposure
 - Encourage oral hydration
 - Poison Control consulted
 - Patient educated on safe chemical storage
-

PRE-BILLING ICD-10 CODING (FOR AUDIT PURPOSES)

Condition	Code	Description
-----------	------	-------------

Melanoma	C43.6	Malignant melanoma of upper limb, including shoulder
----------	--------------	--

Poisoning	T51.2X2A	Toxic effect of 2-Propanol, Intentional self-harm , initial encounter
-----------	-----------------	--
